

## Using pigpen on a computer

You can make it much easier by installing a pigpen font on to your computer! [Babelstone](#) is a good place to find the pigpen cipher, and it is a free download. You just need to install it on your computer as a font, and it will appear in all of your software programs where you have text options (including MS Word and MS PowerPoint).

Scroll down to the bottom of the Babelstone window to find the download link. Note, these pigpen fonts on this website are Open Font License, which is why they are free to use. When you have downloaded the font, you can install it and Windows will put it into the fonts folder so all software on your computer will be able to access it.

***Remember, you should only download free software that comes with an Open Font, Open Source or Creative Commons licence.***
